

At Walter

SHERATON IS A WORLD
OF SHOWPLACES

6:40 AM Oct 14

at 620 to 635^{AM} today, I saw
what looked like a 4th or 4^{1/2} mag.
star about 20 minutes away
~~and at an angle~~ from Leonis
and at an angle of 100° from
it in binoculars. Nova
Leonis 1978? Dirty Leiber
P.S. Rest noted it at 650. I do not
think it can be 40 Leonis (Flamsteed)
-- too bright. Z.L.
