THE UTILITY, ADAPTABILITY and DECORATIVE VALUE of

*"Invisible Joint"*  
TRADE MARK

## Metal Ceilings and Side Walls

IN the first place, they are a fire retardant and practically fire-proof. When put into old buildings, over old plastered walls, they insure safety from the eventual falling of the plaster, which is a constant menace—either as a result of jar or vibration, or from faulty construction and poor material. The perfection of *"Invisible Joint"* Metal Ceilings gives them the maximum of utility—because of the ease and simplicity of erection. The accuracy of the power-stamping machines, which are made in our own well-appointed machine shops, and the employment of skilled and experienced labor, contribute to the standard of excellence which *"Invisible Joint"* Metal Ceilings and Side Walls have acquired.

### AS TO ADAPTABILITY

The makers of *"Invisible Joint"* Metal Ceilings have made a special study of their adaptability to different kinds of buildings. The variety of style and design makes them appropriate for every conceivable shape or class of interior, where metal can be used. Broad ceilings and high walls or narrow stores and buildings where space is limited can be fittingly treated by applying those designs which are best adapted to them. Expensive and high-class buildings of concrete or steel, such as churches, theaters, auditoriums or hotels can be furnished with *"Invisible Joint"* Ceilings and Side Walls that are in complete harmony with massive and magnificent architectural triumphs.

### SPECIAL CEILING PLANS

On request, our corps of draughtsmen will furnish special detailed plans for interiors for any kind of building. They are equipped with an automatic, electrically operated Blue-Printing Machine for that purpose. This renders the adaptability of our ceilings to every purpose most complete and satisfactory.

### DECORATIVE VALUE

Every source of artistic research has been drawn upon to enhance the value of *"Invisible Joint"* Ceilings from a decorative standpoint, and the new designs, illustrated herein, together with the old standard patterns, make this line the most complete, from an artistic standpoint, of any manufactured. Among other strikingly new designs, we are showing in this catalogue the deepest panel or field plate on the market. With the perfection of the plates, which are deeply and clearly embossed, without dent or depression, any lingering objection to a Steel Ceiling is overcome; and *"Invisible Joint"* Metal Ceilings—with their DIE-CUT NAIL HOLES AND REPRÉSSÉ BEADS—are admittedly most handsome and artistic.

## Directions for Applying *"Invisible Joint"* Metal Ceilings and Side Walls

**A** BLUE-PRINT, which is a working drawing showing the arrangement of the various plates, is furnished with every ceiling sold. Attached to our invoices are itemized packing sheets giving quantity and catalog number and size of the material shipped. The bill of lading shows the exact number of crates, bundles or bags in the shipment.

The first thing to do when a shipment arrives is to check the number of packages with the bill of lading. The contents of each package should then be checked and counted against the packing sheet, using the catalog as a guide for the various designs.

Check the measurements on the blue-print with the building. If any material is short in the crates, or the blue-print does not agree with the building, *notify us at once before you start to erect the ceiling.* After the material and blue-print are carefully checked, proceed as follows:

If possible, it is best to scaffold the whole room, but a movable scaffold may be used.

When ceiling is boarded or sheathed most of our designs can be applied directly to the sheathing. If the ceiling is plastered, wood furring strips must be employed regardless of the plates used, as it is not practical to apply metal ceiling direct to lath or plaster. It is not necessary to remove old plaster, as the wood furring strips, when erected, will hold it in place. If plaster is loose, extra strips should be placed where necessary.

Follow the blue-print carefully and observe the starting point and center line. *The starting point is not always on the center line.* Great care must be taken to make sure that the center line is in the exact center on both ends, as well as the middle of the room. Many rooms vary on the ends, so it is best to get the exact center on each end and strike a chalk line. This should be done lengthwise as well as crosswise of the room.

Observe whether plates start on the center line or not. If not, measure the proper distance on side of center line, and if wood strips are used, center the strips on this line. You then have the starting line one way of the building. The same operations are necessary the other way of the building.

Find the location of the starter plate on the plan. Same will usually be found in the rear of the room. Observe the exact distance from the rear wall, and with the location of the starting line you are ready to apply the field plate.

Strike a chalk line for each wood strip placed, taking care that the proper distance required will fit in the center of the strip. If the strips are put six inches on center for field

plates, no cross furring is necessary. If placed twenty-four inches on center, cross furring is necessary every forty-eight inches, or on the end of every plate. The next step depends on the design and style of ceiling. If the design has a border around the field plates, this should be put on next. If a mould or moulded filler is used, this can be applied next to the field plate or border.

If a center ornamentation filler is used, this should be applied after the field plate is in position and before placing the mould or cornice. Care should be taken to get this filler in the exact center of the space. The cornice generally projects more than the mould, so great care must be used in striking the chalk line of the cornice and moulding. The balance of the space will be covered by the center ornamentation filler.

After this the moulding is applied. This makes a finish on one side of the filler. The cornice is applied last and completes the ceiling. We furnish stamped one-piece mitres for all cornices of a depth of four inches or over for right angle corners only. *All irregular mitres must be cut by the erector.* We send a sufficient amount of material to make these mitres, but cannot be held responsible for any unnecessary waste.

## Directions for Applying *"Invisible Joint"* Metal Ceilings and Side Walls

(Continued from page 4)

When iron girders are used in a building and are to be covered with metal ceiling, it is necessary to build woodwork around same to receive the ceiling, the construction of which is shown on the drawing we furnish.

Ceiling panels cannot be arranged to accommodate gas and electric light drops; but all such drops must be placed to conform to our drawing and layout. Lights can be dropped from either the center or corner of the plate, which necessitates but very little change to get them to come about where they are wanted.

Side walls are easily applied. One-half inch sheating or strips are used. If strips are used, they should be placed six or twelve inches on center.

When sending in measurements for metal ceiling, make a simple outline of the shape of the room, showing the measurements in figures. Drawings do not have to be made to scale.

Give the exact size and location of all offsets, such as chimneys, elevators, skylight openings, beams and stairways. State whether or not cornice can be used across the front of the room.

The diagram on page 6 shows the various measurements needed for different styles of ceiling. Follow same closely to assist us in designing artistic arrangements.

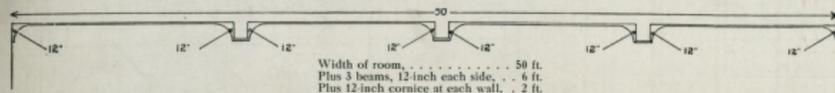

QUOTATIONS AND LIST PRICES include all sheet-metal shown in the design specified, with one wood bracket cut to the profile of cornices and mouldings at each lapping joint. THE SHIPPING WEIGHT of *"Invisible Joint"* Steel Ceilings is 65 pounds per 100 square feet crated. They are accepted for transportation at fourth-class rates.

HOW TO ESTIMATE THE COST OF *"Invisible Joint"* STEEL CEILINGS.—Determine the area of the ceiling by multiplying the length of the room, plus the depth of the

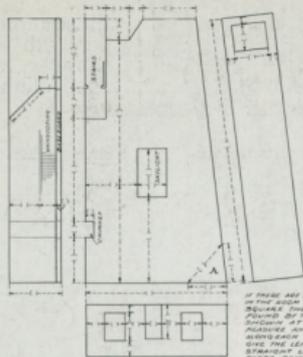

cornice wherever used, by the width of the room, plus the depth of the cornice, thus: For a room 54 x 26, with a 12-inch cornice on the sides and ends—

Length, . . . . .	54 ft.	Width, . . . . .	26 ft.
Plus 12-inch cornice on two ends, . . . . .	2 ft.	Plus 12-inch cornice on two sides, . . . . .	2 ft.
56 ft. . . . .	×	28 ft. = 1568 sq. ft.	

If the rooms contain beams which are to be covered, add for them thus:

Do not make any deductions for skylight openings of less than 100 square feet, nor for stairways, chimneys or other openings or projections of less than 50 square feet.

## METAL CEILINGS

AS APPLIED TO

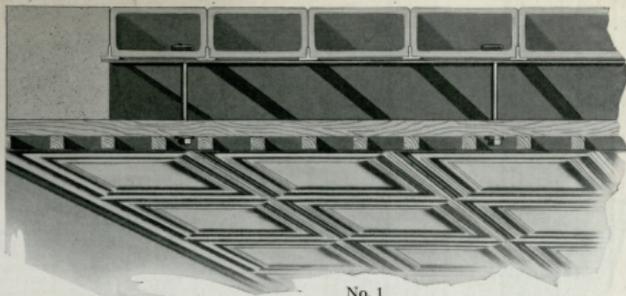

# Concrete Construction

THERE is a growing demand for *"Invisible Joint"* Metal Ceilings for Cement or Concrete Buildings, especially in factory offices and showrooms. Stucco designs, which are in architectural harmony with the cement work, are generally recommended. These ceilings are much less expensive than ornamental plaster work, fully as artistic and more dependable. Three methods of applying same are here shown.

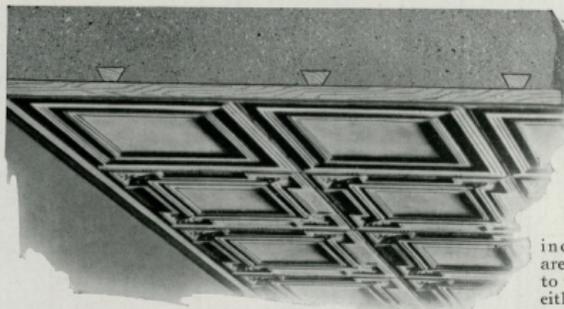

**No. 1** Shows application of metal ceiling to building with concrete beams and book tile ceiling or roof. Toggle bolts are used to fasten the rods to the tile. Seven-eighths by 1/4 inch furring strips are fastened to these bolts to suspend the ceiling the proper height, and regular furring strips applied crosswise, either 6 or 24 inches on center, according to the design.

No. 3

No. 1

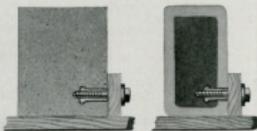

No. 2

## No. 2

Shows application of metal ceiling to concrete keyed wood strips, imbedded in the concrete when the floor is poured. Seven-eighths by 1/4

inch wood strips are nailed crosswise to the keyed strips, either 6 or 24 inches on center, according to the design.

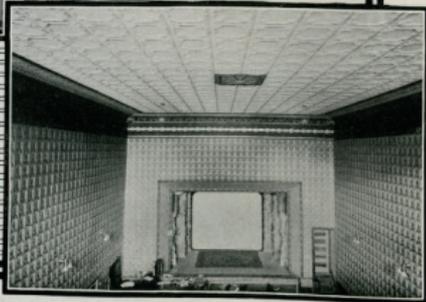

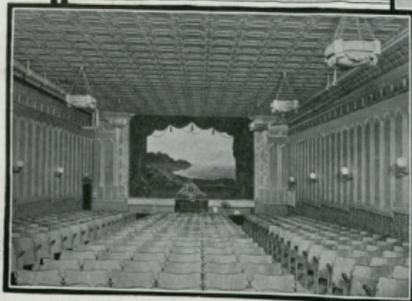

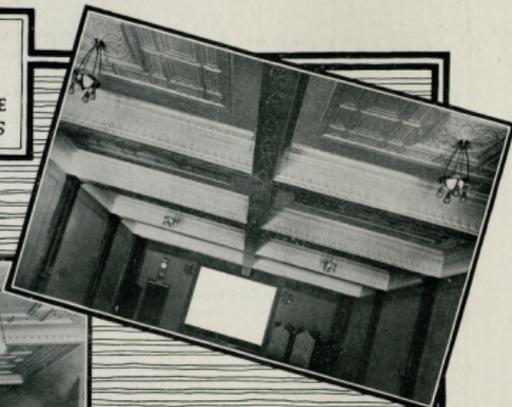

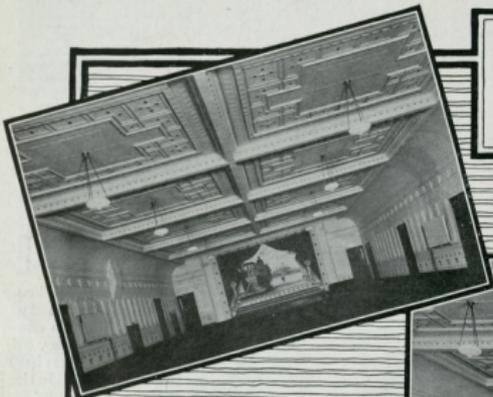

**No. 3** Shows method of attaching metal ceilings to the concrete beams. By this method high ceilings can be brought down even with the bottom of the beam.

## SEND US PLANS

And we will submit blue prints showing the best method of covering. The use of metal ceilings in concrete structures has become very general and we have made a study of the subject, so are prepared to furnish complete plans and any information you may need.

Appropriate for any style or class of building — Banks, Stores, Restaurants, Hotels, Theaters, Churches, Residences, etc.

## Ready - Punched Nail Holes and Repressed Beads

**N**AILING of *Invisible Joint* Metal Ceilings is made easy by the ready - punched nail holes, as shown, "where corners overlap." The holes are die cut and accurately placed, so that each nail hole in the corner of any field plate will exactly match in location, size and shape, the hole in the corner of any other plate of the same pattern. And the beads, which also overlap, are repressed, which makes them perfect in shape and a precise fit, so that *Invisible Joint* Ceilings go up quickly and without bruising of fingers and consequent profanity.

# Section 1

## Combination Ceiling Designs

THE classification of the combination ceiling designs in this section is arranged in the following order:

Extra Deep Panel	Gothic
Colonial	L'Art Nouveau
Stucco	Romanesque
Venetian	Louis XIV
Greek	Miscellaneous
French Renaissance	Residence

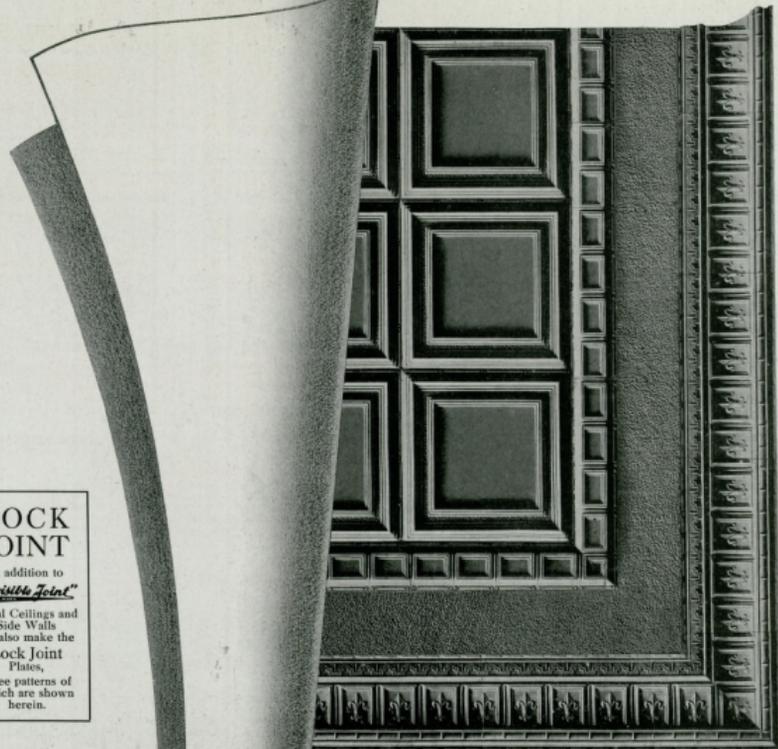

There are infinitely more ways of combining these individual plates, borders and mouldings, than are here shown, but we feel that we have presented on the following pages in this section a sufficient variety of combinations to give a fair idea of their artistic merit and special adaptability to different kinds of interiors—but it is well to remember that other equally artistic designs can readily be worked out to suit the vastly varied tastes of different classes of people.

### LOCK JOINT

In addition to  
*"Invisible Joint"*  
Metal Ceilings and  
Side Walls  
we also make the  
Lock Joint  
Plates,  
three patterns of  
which are shown

## Side Walls

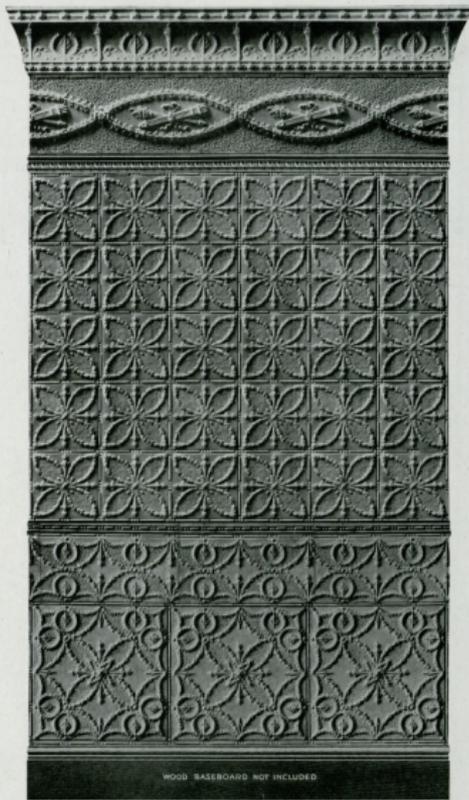

SIDE WALLS afford a grand opportunity for originality of design. The various patterns of plates are made of different dimensions, and the very stylish wainscoting effects are obtained by using square and oblong plates in artistic combination. There is no limit to this style variation, and mouldings and friezes can be used by way of additional adornment and variety. All the various classes of designs shown in the Ceiling combinations are also shown in the Side Walls.

We want to call attention here to the fact that we do not furnish the Wood Base Board with Side Walls.

WOOD BASEBOARD NOT INCLUDED

# Section 3

## Individuals

THE Individual Plates, Mouldings, Fillers, Centers, Corners, etc., which enter into the various designs or combinations of Ceilings or Side Walls are shown in this section.

The depth and dimensions of each are given, and in most cases the profile is shown, so that a very definite and clear idea of the whole design may be obtained. It is these particulars that govern the adaptability of a design to the different classes and kinds of buildings.

That being the case, we suggest a careful study of the details of Individuals as an aid to the selection of an appropriate combination for any special purpose.

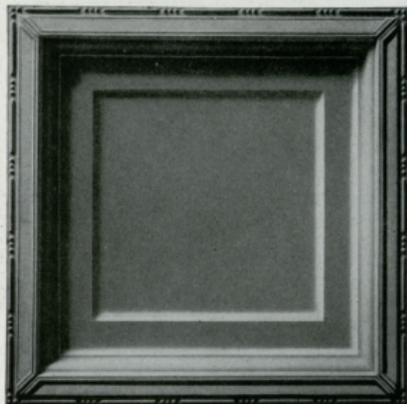

Plate No. 2701. 13c per sq. ft.  
30 x 30 inches. 2 1/4 inches deep.

The panel  
shown  
here  
is the  
deepest  
plain  
panel  
on the  
market

Wood Furring Strips are necessary with all Panels shown on  
this page.

No. 2722. 9c per lineal ft.  
6 x 30 inches. 1 1/2 inches deep.

No. 2721. 10c per lineal ft.  
6 x 33 inches. 1 1/2 inches deep.

The triangle  
effect on end  
of moulding  
at bottom of  
page saves  
use of mitre  
when  
moulding is  
used around  
each plate  
as in  
Design No.  
2770

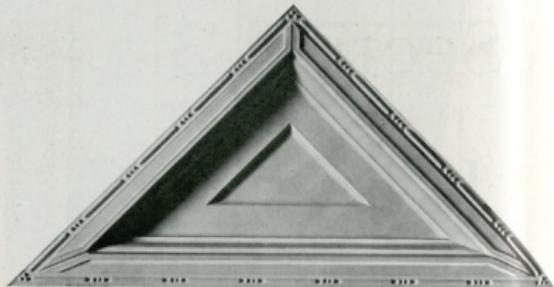

Plate No. 2701. 45c Each.  
50 x 30 x 42 1/2 inches. 2 1/4 inches deep.

No. 2720L.  
9c each.  
6 x 6 inches.

No. 2720-T.  
9c each.  
6 x 6 inches.

No. 2720-X.  
8c each.  
6 x 6 inches.

No. 2720. 10c per lineal ft.  
6 x 36 inches. 1 1/2 inches deep.

Plate No. 1906. 8c per sq. ft.  
24 x 24 and 24 x 48 inches. 1/4 inch deep.

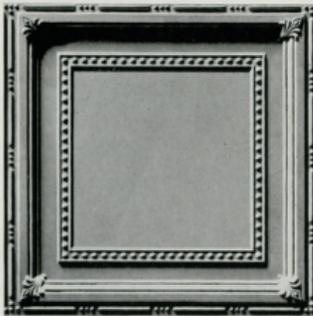

Plate No. 1908. 8c per sq. ft.  
24 x 24 and 24 x 48 inches. 1/4 inch deep.

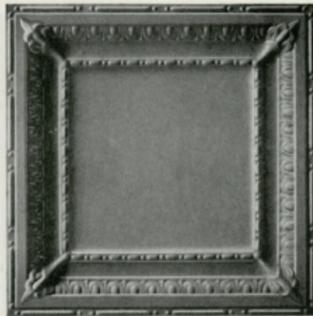

Plate No. 1907. 81c per sq. ft.  
24 x 24 and 24 x 48 inches. 1/2 inch deep.

Smaller sizes of the above panels shown on pages 218-219.  
Wood Furring Strips are necessary with all Panels shown on this page.

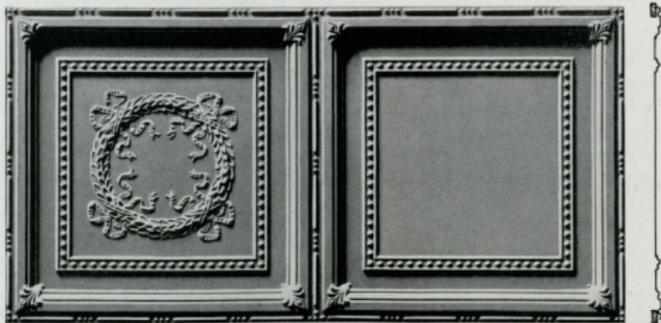

Plate No. 1908-D. 8c per sq. ft.  
24 x 48 inches. 1/4 inch deep.

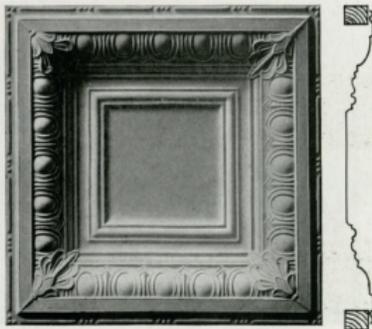

Plate No. 1966. 12c per sq. ft.  
24 x 24 inches. 2 1/2 inches deep.

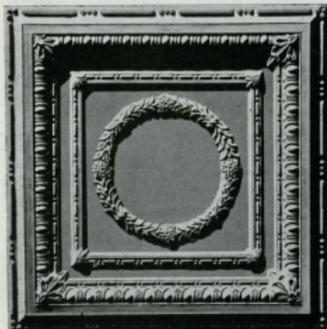

Plate No. 1911. 9c per sq. ft.  
24 x 24 and 24 x 48 inches. 1/2 inch deep.

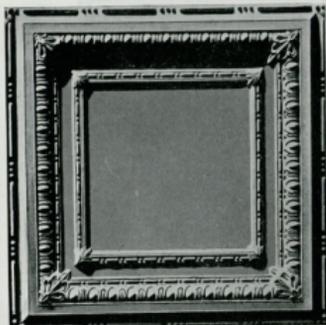

Plate No. 1916. 9c per sq. ft.  
24 x 24 and 24 x 48 inches. 1/2 inch deep.

Smaller sizes of the above panel shown on page 218-219.

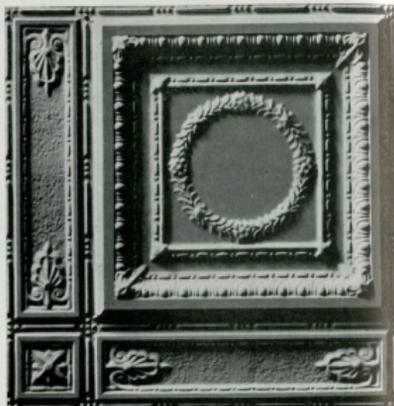

Plate No. 1913. 9c per sq. ft.  
30 x 30 inches (Border Attached). 1/2 inch deep.

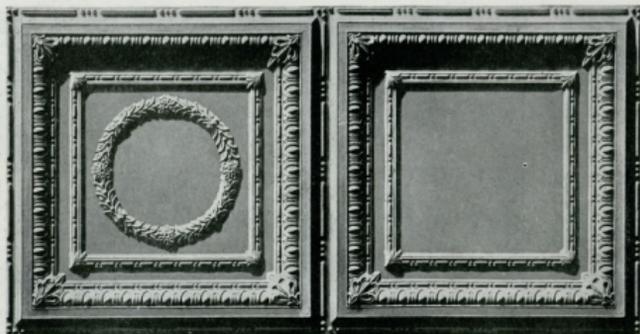

Plate No. 1910-11. 9c per sq. ft.  
24 x 48 inches. 1/2 inch deep.

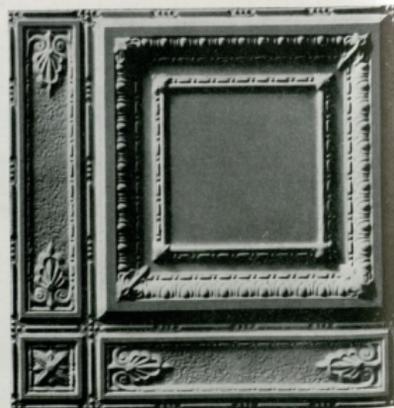

Plate No. 1912. 9c per sq. ft.  
30 x 30 inches (Border Attached). 1/2 inch deep.

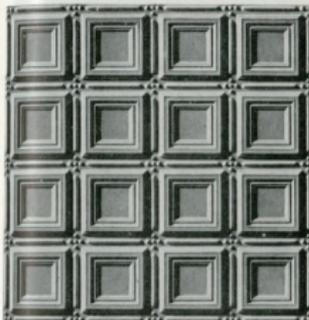

Plate No. 1926. See per sq. ft.  
6 x 6, 12 x 12, 12 x 24, 24 x 24 and 24 x 48 inches.  
 $\frac{1}{4}$  inch deep.

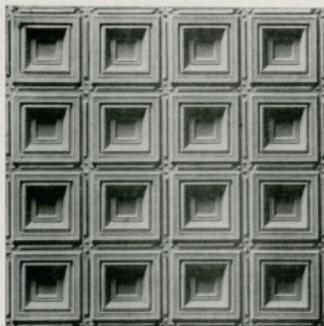

Plate No. 1905. See per sq. ft.  
6 x 6, 12 x 12, 12 x 24, 24 x 24 and 24 x 48 inches.  
 $\frac{1}{4}$  inch deep.

Plate No. 2225. See per sq. ft.  
12 x 12, 12 x 24, 24 x 24 and 24 x 48 inches.  
 $\frac{1}{4}$  inch deep.

Wood Furring Strips are necessary with all Panels shown on this page.

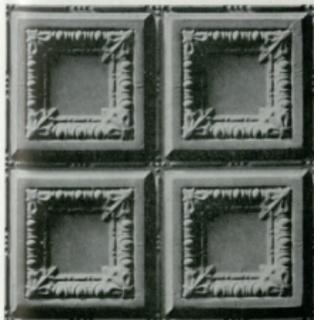

Plate No. 1910-A. See per sq. ft.  
12 x 24, 24 x 24 and 24 x 48 inches.

Plate No. 1903. See per sq. ft.  
12 x 12, 12 x 24, 24 x 24 and 24 x 48 inches.  
 $\frac{1}{4}$  inch deep.

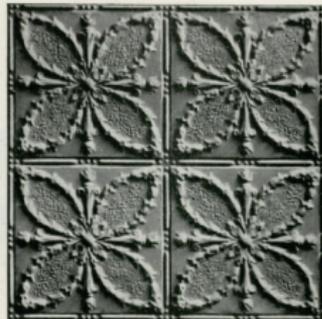

Plate No. 1904. See per sq. ft.  
12 x 12, 12 x 24, 24 x 24 and 24 x 48 inches.  
 $\frac{1}{4}$  inch deep.

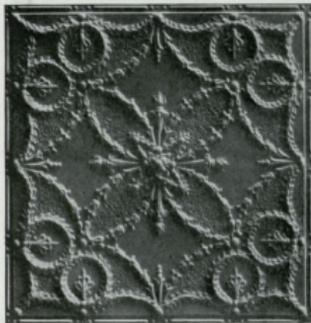

Plate No. 1901. 8c per sq. ft.  
24 x 24 and 24 x 48 inches.  $\frac{1}{4}$  inch deep.

Plate No. 1902. 8c per sq. ft.  
24 x 24 and 24 x 48 inches.  $\frac{1}{4}$  inch deep.

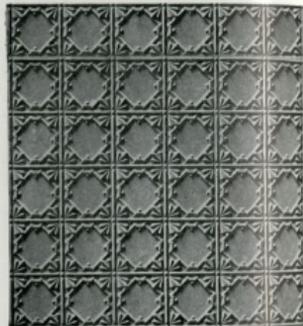

Plate No. 2296. 8c per sq. ft.  
12 x 12, 12 x 18, 12 x 24, 12 x 48, 24 x 24, 24 x 48 and  
24 x 96 inches.  $\frac{1}{4}$  inch deep.

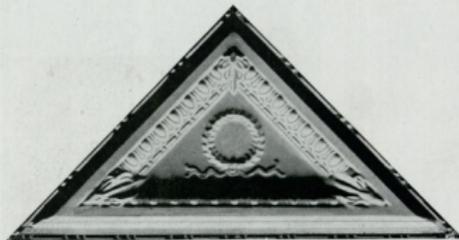

Plate No. 1910. 22c each.  
24 x 24 x 34 inches.  $\frac{1}{2}$  inch deep.

SPECIAL Ceiling Plans are gladly supplied on application. Nooks and corners which require triangular plates or unusual shapes can be handled in a very satisfactory and pleasing manner by our draughting department.

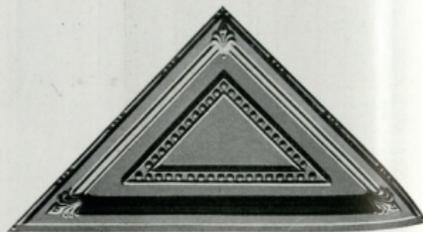

Plate No. 1908. 20c each.  
24 x 24 x 34 inches.  $\frac{1}{2}$  inch deep.

## LOCK-JOINT PLATES

MILWAUKEE CORRUGATING CO.  
Milwaukee Artistic Metal  
Ceiling Co., Dept.

Plate No. 1800. 9½¢ per sq. ft.  
24 x 24 inches. ⅜ inch deep.

Wood Furring Strips necessary with this Plate.

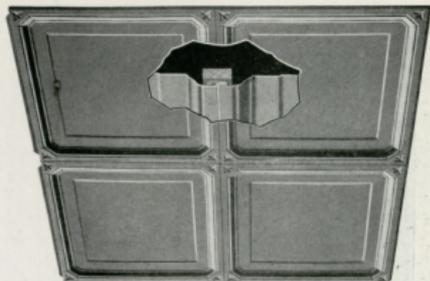

### A New Feature

#### THE LOCK-JOINT

Plate is easily and quickly applied. The sheets interlock and seams are not noticeable. No cross-furring strips required, and nail holes are not exposed.

#### Lock-Joint Plates

furnished only in patterns shown on pages 32, 33, 85 and 86

Perspective View showing Application of Lock Joint Panels.

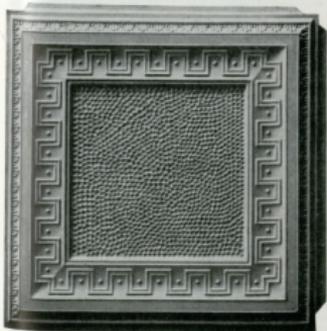

Plate No. 2400. 9½¢ per sq. ft.  
24 x 24 inches. ⅜ inch deep.

This design also furnished in Lap Joint. See page 225.

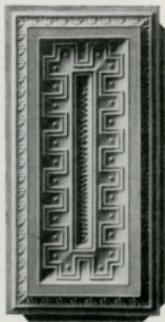

Plate No. 2400. 10¢ per sq. ft.  
12 x 24 inches. ⅜ inch deep.

Plate No. 2400. 10½¢ per sq. ft.  
12 x 12 inches. ⅜ inch deep.

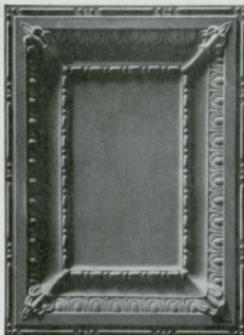

Plate No. 1907. 9c per sq. ft.  
18 x 24 inches.  $\frac{1}{4}$  inch deep.

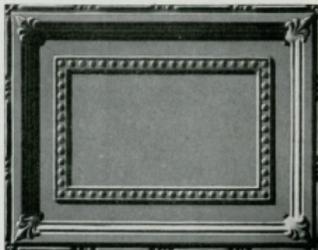

Plate No. 1908. 8 $\frac{1}{4}$ c per sq. ft.  
18 x 24 inches.  $\frac{3}{8}$  inch deep.

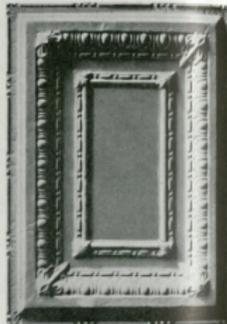

Plate No. 1910. 9 $\frac{1}{4}$ c per sq. ft.  
18 x 24 inches.  $\frac{1}{4}$  inch deep.

Wood Furring Strips are necessary to entry the depth of these four Plates.

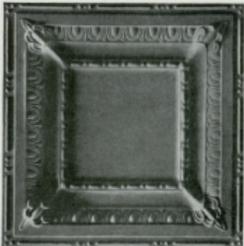

Plate No. 1907. 9 $\frac{1}{4}$ c per sq. ft.  
18 x 18 inches.  $\frac{1}{4}$  inch deep.

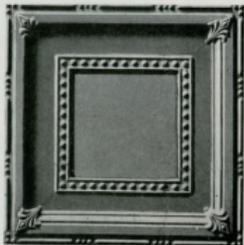

Plate No. 1908. 9c per sq. ft.  
18 x 18 inches.  $\frac{3}{8}$  inch deep.

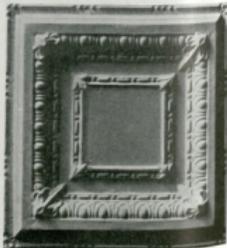

Plate No. 1910. 10c per sq. ft.  
18 x 18 inches.  $\frac{1}{4}$  inch deep.

Wood Furring Strips are necessary to carry the depth of these six Plates.

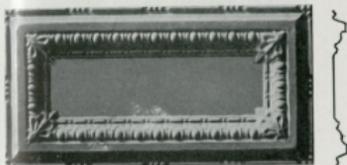

Plate No. 1916. 16c per sq. ft.  
12 x 24 inches. 1/2 inch deep.

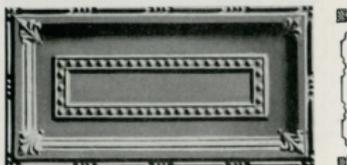

Plate No. 1908. 8c per sq. ft.  
12 x 24 inches. 1/2 inch deep.

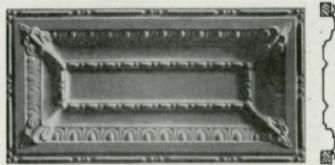

Plate No. 1907. 9 1/2c per sq. ft.  
12 x 24 inches. 1/2 inch deep.

Plate No. 1910. 10 1/2c per sq. ft.  
12 x 18 inches. 1/2 inch deep.

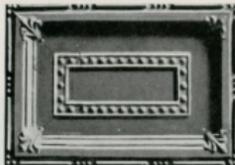

Plate No. 1908. 9 1/2c per sq. ft.  
12 x 18 inches. 1/2 inch deep.

Plate No. 1907. 10c per sq. ft.  
12 x 18 inches. 1/2 inch deep.

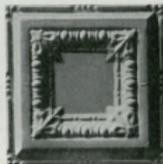

Plate No. 1910. 11c per sq. ft.  
12 x 12 inches. 1/2 inch deep.

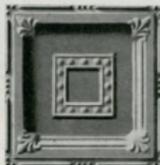

Plate No. 1908. 10c per sq. ft.  
12 x 12 inches. 1/2 inch deep.

Plate No. 1907. 10 1/2c per sq. ft.  
12 x 12 inches. 1/2 inch deep.

Plate No. 2213. 8½¢ per sq. ft.  
24 x 24 and 24 x 48 inches. ⅜ inch deep.

Plate No. 2212. 8½¢ per sq. ft.  
24 x 24 and 24 x 48 inches. ⅜ inch deep.

Plate No. 2211. 8½¢ per sq. ft.  
24 x 24 and 24 x 48 inches. ⅜ inch deep.

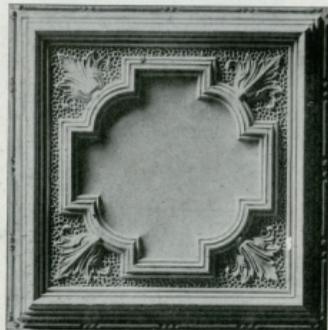

Plate No. 2207. 8½¢ per sq. ft.  
24 x 24 and 24 x 48 inches. ⅜ inch deep.

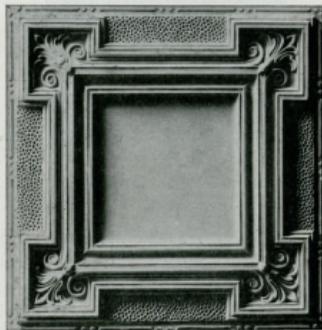

Plate No. 2206. 8½¢ per sq. ft.  
24 x 24 and 24 x 48 inches. ⅜ inch deep.

Plate No. 2209. 8½¢ per sq. ft.  
24 x 24 and 24 x 48 inches. ⅜ inch deep.

Plate No. 2202. 85¢ per sq. ft.  
24 x 24 and 24 x 48 inches.  $\frac{1}{8}$  inch deep.

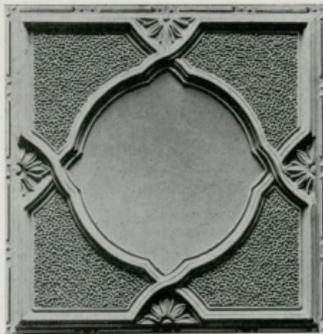

Plate No. 2203. 85¢ per sq. ft.  
24 x 24 and 24 x 48 inches.  $\frac{1}{8}$  inch deep.

Plate No. 2205. 9¢ per sq. ft.  
24 x 24 and 24 x 48 inches.  $\frac{1}{8}$  inch deep.

Plate No. 2204. 85¢ per sq. ft.  
24 x 24 and 24 x 48 inches.  $\frac{1}{8}$  inch deep.

Our  
Stucco  
Designs

are perfect imitations of Stucco work and a wonderful variety of artistic combinations can be made with them.

Plate No. 2218. 16¢ per sq. ft.  
24 inches wide, any length in multiples of one foot from 4 to 8 feet.  $\frac{1}{8}$  inch deep.

Plate No. 2201. Size per sq. ft.  
24 x 24 and 24 x 48 inches.  $\frac{1}{4}$  inch deep.

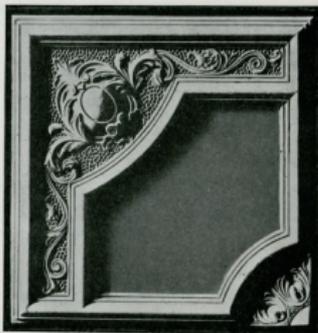

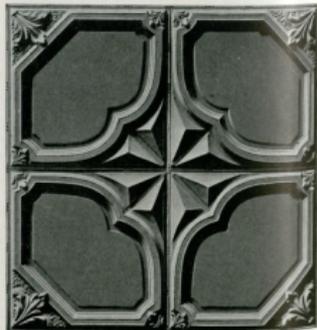

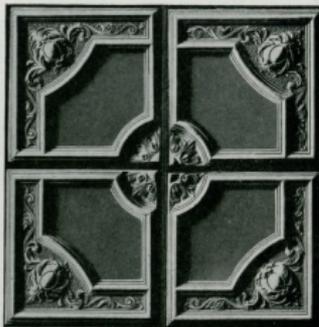

Plate No. 2200. Size per sq. ft.  
24 x 24 and 24 x 48 inches.  $\frac{1}{4}$  inch deep.

Plate No. 2219. Size per sq. ft.  
24 x 24 and 24 x 48 inches.  $\frac{1}{4}$  inch deep.

The three lower plates illustrate a combination of four plates of the three designs shown above.  
One of the latest ideas in Metal Ceiling.

DIE  
SINKING  
"Invisible Joint" Metal Ceilings  
are not produced from ordinary foundry  
dies, but from dies cast in steel in the  
finest procurable sand moulds, and the  
finest details shown. Then the surface  
is carefully pickled to remove all  
scale. The beads are accurately  
milled from a templet, making  
an absolutely true and inter-  
changeable joint.

SHEETS INTERLOCK WITHOUT NOTICEABLE SEAMS WHEN APPLIED.

## Lock-Joint Tile Is Easily and Quickly Applied

**I**T makes the ideal covering for Bathrooms, Kitchens, Vestibules, Lavatories, Restaurants, Barber Shop Walls and Ceilings and other places where sanitary conditions are imperative. Its weight is very considerably less than real tile, can be applied by any mechanic and will last indefinitely. Is fire and crack proof. Most easily kept clean.

Plate No. **2001**. 3 x 3 inch Pattern.

MOULDINGS afford an infinitely great variety of artistic combinations in metal ceilings or interiors. The arrangement of these mouldings in combination with field plates, fillers, cornice, etc., is a fascinating study, and we are glad to gratify the artistic tastes of the individual buyer of ceilings. Our designing and draughting department is well equipped and always ready to make special designs or combinations to meet this demand for individual expression.

MITRES are not provided for the five mouldings shown opposite. These mouldings are small and the figure correspondingly large in proportion, so that a very slight variation would prevent a stamped mitre from fitting accurately, and to insure a neat job it is advisable to fit these by coping them.

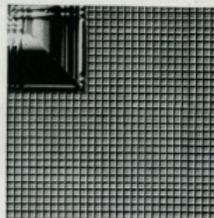

These mouldings are suitable for trimming above the tops of show windows where there is not sufficient wall space above the glass to permit the use of deeper cornices. In a great majority of store rooms the windows run so close to the ceiling that cornice is used all along the sides and across the rear of the room only, and the space above the show windows finished with mouldings of this character of suitable depth.

# The Results of a Fire Test

## Made at the Columbia University Fire Testing Station Upon Various Types of Ceiling Construction

A REPORT of this test, with photographs and diagrams showing the fire-resisting qualities of different materials in ceiling construction, has been made and widely published. We have not the space to print this report in detail, but feel that a brief synopsis of the results of the test should be given here for the benefit of everyone interested in Safety Ceiling Construction.

The ceilings were erected in a test chamber designed especially for the conduct of fire and water tests upon fire-proof floor construction.

Six different panels of various ceiling construction were erected in

the test chamber and subjected to gradually increasing temperatures by means of thermo couples, connected to a La Chatelier Pyrometer.

The various panels were constructed in accordance with standard practice. All plaster was mixed and applied in the presence of an official of the building department of the City of New York, by an union mechanic, and the metal ceilings were taken from regular stock.

The result of the test is important, as showing the comparative fire-resisting qualities of plaster and metal ceilings, and was as follows:

### PLASTER CEILING

(On Wood Lath)

Remained in Place

**12 Minutes**

Against 849° Fahrenheit

### METAL CEILING

Remained in Place

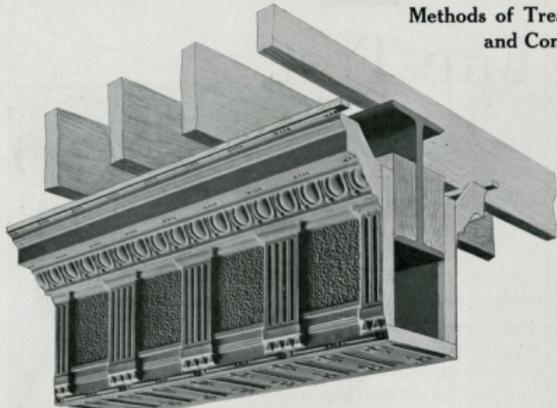

**70 Minutes**

Against 1366° Fahrenheit

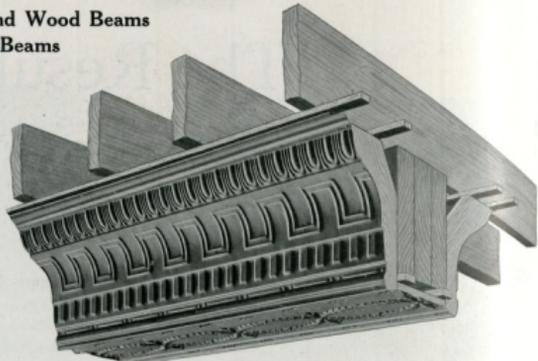

It will be noted that the Metal Ceiling, which was subjected to nearly double the heat, lasted more than five times as long as the Plastered Ceiling. The average owner and builder will realize that this test proves that the destructive effects of a fire can be almost

entirely prevented when it is caught in its incipient stages. It shows Metal Interiors are a great fire retardant and practically fire-proof. No fire resulting from ordinary causes would gain sufficient headway to do much damage before it could be subdued.

Methods of Treatment of Steel and Wood Beams  
and Construction of False Beams

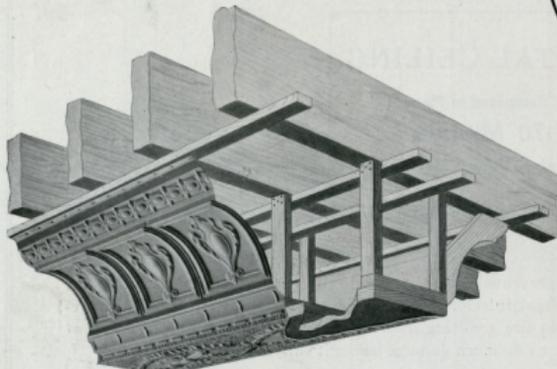

No. 1—Shows Steel Beam furred down to take care of depth of cornice.

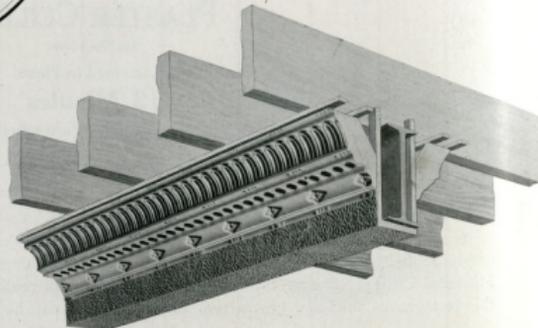

No. 2—Shows Method of Applying metal cornice and cover to wood beam.

Metal  
Cornice and  
Beam Cover can  
be applied on any  
size or style beam.  
Those shown on this  
page are only a few  
suggestions

No. 3—Shows Construction of false beam made of  $\frac{1}{2}$  x 1  $\frac{1}{4}$  inch wood strips with beard at bottom.

No. 4—Shows Treatment of steel beam, where beam is deeper than cornice. Stippled filler is used to cover the extra depth.

MILWAUKEE CORRUGATING CO.

Milwaukee Artistic Metal  
Ceiling Co., Dept.

BEAM CORNICE  
No. 2436

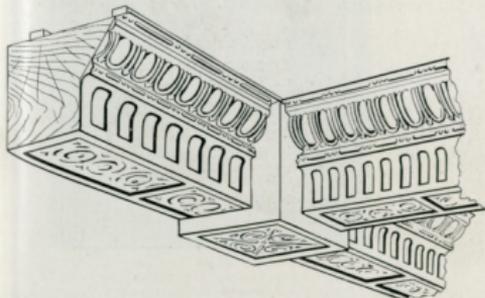

Size 12 in. wide, 6 in. deep, 6 in. soffit.  
Beam, 30¢ per lineal ft.;  
Wall Beam, 22¢ per lineal ft.  
Blocks \$1.00 each.

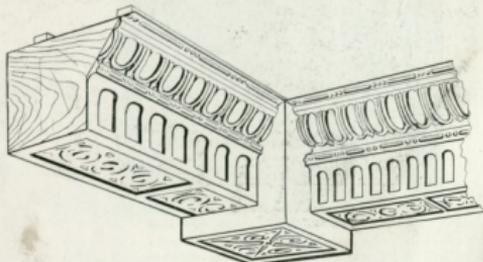

Showing Center Construction.

THIS Combination of False Beam and Cornice is an artistic and inexpensive method of dividing large ceilings into smaller squares or panels, thus giving variation to the monotony of one pattern on a big ceiling. The false beam is constructed of blocks one inch thick by six inches deep, six inches wide at the soffit and twelve inches wide at the base.

Showing Side Wall Construction.

Showing Corner Construction.

No. 2240-B. 9½¢ per sq. ft.  
Any length, in multiples of 6 inches, from  
24 inches up to 8 feet.

Side Wall Plate  
No. 2249

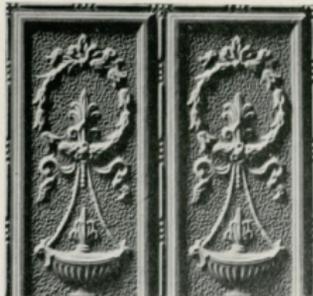

may be used without  
Frieze, as the twelve  
inches of Stipple at  
the top will allow for  
any variation. This  
is the only paneled  
Side Wall having this  
feature.

COLONIAL.

Any length, in multiples of 6 inches, from 48 inches  
up to 96 inches. 24 inches wide; ¼ inch deep.

SIDE WALLS  
GOTHIC.

No. 1740, 10¢ per sq. ft.  
Any length, in multiples of 6 inches, from 48 inches  
up to 96 inches long; 24 inches wide;  $\frac{1}{8}$  inch deep.

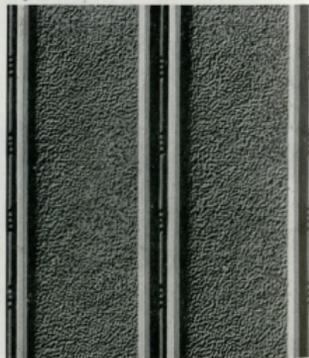

SIDE WALLS are suscep-  
tible of great variation  
in treatment because of the  
difference in height of ceil-  
ing. The character of the  
building also governs. We  
can supply the correct and  
most fitting designs for  
great and costly churches,  
theatres, hotels or modest  
residences.

No. 1740-B, 9 $\frac{1}{2}$ ¢ per sq. ft.
